

ABSTRACT

A luer connector may comprise a female fitting and a male fitting. The female fitting may have an open end including a bore and an opening at the end of the bore. The bore has a taper and the opening has a diameter which are specified in accordance with ISO International Standard 594. The male fitting may have a projection which is capable of fitting within the tapered bore of the female fitting. The male fitting may also include a fluid passage which extends through the projection and has an effective inner diameter of at least about 0.130 inch.
